

TRAINING

OBD-II Monitor Systems:

EVAP MONITORS –

Diagnose and Repair

“Sometimes the differences in various EVAP systems can be a challenging “maze” through when DTC’s bring vehicles into the bay.

Using a baseline of commonality, this course takes technicians into the latest OEM specific systems that use natural vacuum, key off pressurized and vacuum pump systems used by every manufacturer.

The course includes practical tips for getting the most diagnostic information from various tools such as a smoke machine along with advanced scan tool information including OBD II Mode \$06 data.
